

Problem Statement

You are given a list of N people who are attending ACM-ICPC World Finals. Each of them are either well versed in a topic or they are not. Find out the maximum number of topics a 2-person team can know. And also find out how many teams can know that maximum number of topics.

Note Suppose a , b and c are 3 different people then (a,b) and (b,c) are counted as two different teams.

Input Format

The first line contains two integers N and M separated by a single space, where N represents the number of people, and M represents the number of topics. N lines follow.

Each line contains a binary string of length M . If the i_{th} line's j_{th} character is 1, then the i_{th} person knows the j_{th} topic and doesn't know the topic otherwise.

Output Format

On the first line, print the maximum number of topics a 2-person team can know.

On the second line, print the number of 2-person teams that can know the maximum number of topics.

Constraints

$$2 \leq N \leq 500$$

$$1 \leq M \leq 500$$

Sample Input

```
4 5
10101
11100
11010
00101
```

Sample Output

```
5
2
```

Explanation

(1, 3) and (3, 4) know all the 5 topics. So the maximal topics a 2-person team knows is 5, and only 2 teams can achieve this.
